

Software engineer with 5+ years building large-scale data systems and pipelines in healthcare. Focused on high-volume data processing, distributed workflows, and backend services, with experience integrating LLMs to extract and structure unstructured data.

SKILLS & TECHNOLOGIES

Data Engineering: Data pipelines, ETL/ELT, high-volume processing, data modeling, Snowflake, PostgreSQL

Programming: Python, JavaScript, TypeScript, Flask, REST APIs

Cloud & Infrastructure: AWS (Step Functions, ECS, Lambda, S3, SNS/SQS), Docker, CI/CD

AI & Data Systems: LLM integration, structured prompting, vector search, retrieval-augmented generation

Tools: Pandas, Sci-kit Learn, Postman, GitHub, JIRA

EXPERIENCE

Software Engineer III Komodo Health (2022 – 2025)

- Owned and scaled data infrastructure supporting 3,500+ automated workflows weekly and processing 350K+ documents per quarter with 99.5% uptime
- Built and optimized data pipelines ingesting large volumes of unstructured healthcare documents, improving processing speed by 40% and reducing failures by 70%
- Designed distributed data workflows using AWS Step Functions, coordinating long-running jobs across ECS, Lambda, and S3
- Developed backend services and APIs for querying, transforming, and serving healthcare datasets across internal tools and applications
- Built a document comparison pipeline to detect changes across policy versions, eliminating an 8-month backlog and enabling near real-time data updates
- Designed an AI-powered data enrichment pipeline processing 12M+ provider records using Snowflake, vector similarity, and deterministic matching
- Built LLM-based extraction workflows to convert raw HTML into structured JSON with strict schema enforcement
- Achieved ~93% extraction accuracy and ~97% entity resolution accuracy through prompt iteration, normalization, and validation strategies
- Implemented scalable processing techniques (batching, chunking, candidate filtering) to handle large datasets efficiently
- Used AI-assisted workflows to accelerate development, debug data issues, and improve transformation accuracy

Software Engineer Infosys (Comcast – Automation Team) (2021 – 2022)

- Built automation and validation pipelines for distributed systems, executing 80+ test cases weekly with ~98% reliability
- Developed API-based data validation workflows and integrated them into CI pipelines
- Analyzed logs and system outputs to identify data inconsistencies and pipeline failures

Founding Software Engineer HomeSlice (2020 – 2021)

- Built a data-driven full-stack platform using Python, AWS, and PostgreSQL to process and analyze real estate datasets
- Designed data pipelines ingesting external sources (Zillow, economic, crime data) for predictive modeling
- Implemented a machine learning pipeline achieving ~99% accuracy for property valuation predictions

EDUCATION

Data Science Certification | April 2020 | Rutgers University – Division of Continuing Studies

Astrophysics & Mathematics, Bachelor of Science | May 2018 | Rutgers University – New Brunswick
