NADA IBRAHIM

New York, NY | 201-626-8719
nadaibrhm96@gmail.com | LinkedIn | Github | Portfolio

Experienced Software Engineer with **5+ years** specializing in **designing and scaling high-performance data infrastructure and distributed systems**, with a proven track record of **architecting enterprise-grade platforms**

SKILLS & TECHNOLOGIES

Big Data & Infrastructure: Airflow DAGs, Snowflake, PostgreSQL, MongoDB, High-volume Data Processing, Data Pipeline Optimization, Vector Search & Indexing
Programming Languages: Python, Typescript, JavaScript, C#, .NET, Flask, Node.js, RESTful API Development
Cloud & DevOps: AWS (CloudFormation, ECS, S3, Step Functions, Lambda, SNS/SQS), Docker, CI/CD Pipelines
Data Science & Analytics: Pandas, Matplotlib, Sci-Kit Learn, ML Pipeline Development, RAG patterns, LLM Integration
Tools & Platforms: Git, GitHub Actions, Tableau, Jupyter Notebook, JIRA, Postman, XML Processing

EXPERIENCE

Software Engineer III **Komodo Health (2022 – 2025)**

- **Architected and scaled AWS-based data infrastructure** powering **3,500+ policy jobs** and processing **350K+ documents quarterly**, achieving **99.5%+ uptime** for mission-critical data operations and cutting deployment times by 50%
- **Designed and launched an AI-powered data mapping platform** processing **12M+ provider records** in Snowflake with high-accuracy search indexing, **vector search capabilities**, and instant result retrieval for complex healthcare datasets
- **Optimized high-volume data processing pipelines** using **Airflow DAGs** and AWS services, cutting job failures by **70%**, boosting processing speeds by **40%**, and enabling seamless handling of petabyte-scale data workflows
- **Built scalable Flask-based APIs** handling **thousands of daily requests** for data processing tools, improving response efficiency by **30%** and enabling real-time data access across multiple business units
- **Integrated AI-driven automation** into production data workflows, reducing manual data intervention by **60%** and achieving **$2M+ quarterly savings** in operational costs
- **Developed front-end dashboards** in JavaScript for data visualization, analytics, internal tools, enabling non-technical teams to interact with complex datasets and reducing workflow turnaround time by **40%**
- **Led cross-functional initiatives** to eliminate **$5M+ in annual third-party dataset costs** by optimizing internal data infrastructure and implementing cost-effective data storage strategies

Software Engineer **Infosys (Comcast – Automation Framework Team) (2021 – 2022)**

- **Engineered automation frameworks and pipelines** for quality validation across distributed systems, executing **80+ test cases weekly** and maintaining **98%+ system reliability** across remote DEV environments
- **Developed and integrated API validation scripts** (CSV, XML, SIPp) into CI workflows using **Postman, GitHub, and JIRA**, validating UDP response accuracy and collaborating with onshore/offshore teams to accelerate release cycles

Software Engineer **HomeSlice (2020 – 2021)**

- **Built a full-stack data platform** (Python, JavaScript, AWS, PostgreSQL) with a **99%-accurate ML pipeline** for real estate analytics, processing **large-scale datasets** from Zillow API, crime, and economic data sources
- **Implemented scalable data storage and retrieval systems** enabling seamless equity transactions via responsive web interfaces and real-time data processing

EDUCATION

Data Science Certification | April 2020 | Rutgers University – Division of Continuing Studies
Astrophysics & Mathematics, Bachelor of Science | May 2018 | Rutgers University – New Brunswick
